They include: (1) Statements of Water Division and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriation of Water in California.

Proposes a new appropriation upstream from their diversion, and (3) assists the State to determine if additional water is available for future appropriators. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone with specific exceptions. The filing of a statement (1) provides a record of water use, (2) enables the State to set forth in Water Code section 5100 statements of Water Division and Use must be filed by riparian and pre 1914 appropriate water users as set forth in Water Code section 5100.

An appropriate right is required for use of water on nonirrigated land and for storage of water. Generally, appropriate rights may be exercised only where there is a surplus not needed by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State. Appropriate rights can be granted to waters "foreign" to the natural stream system.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or divert water which originates in a different watershed, water previously stored by others, return flows from use of groundwater, or other "foreign" water to the natural stream system.

There are two principal types of surface water rights in California. They are riparian and appropriate rights.
